SUMMARY

Senior backend and product engineer with 15+ years building and operating production systems. Deepest commercial experience in Ruby on Rails and PostgreSQL; current work uses Go and Python across public products, data pipelines, extraction, and evaluated AI systems. Eight-year Rails client relationship, roughly 10x marketplace performance work, and end-to-end ownership from product decisions through deployment and production behavior. Fluent in English.

TECHNICAL SKILLS

Backend and product: Ruby, Ruby on Rails, Go, Python, SQL, REST APIs, HTMX, server-side rendering

Data systems: PostgreSQL, PostGIS, Redis, SQLite, data modeling, entity resolution, normalization, ETL, scraping

Applied AI: LLM and classifier evaluation, labeled datasets, prompt/model routing, provenance, extraction, NLP

Operations and quality: Linux, systemd, nginx/TLS, Docker, CI/CD, monitoring, deployment automation, automated testing

Agent-assisted delivery: work definition, architecture, output review, testing, deployment, production accountability

EXPERIENCE

Founder / Engineer · hostelpunk.com - 2025-Present

- Built and operate a public seven-language Go/Python/PostgreSQL product; own ingestion, services, data modeling, interface, evaluation, deployment, monitoring, and production operation
- Ingested and normalized 74M reviews from four providers and linked 22,600 properties into a shared cross-provider catalog
- Built 235 versioned analysis signals across LLM, classifier, regex, and deterministic methods, with labeled evaluation data and per-result provenance; recurring hosted infrastructure runs at about \$30/month

Product and Technology Partner, Visual Identity and Rails Engineering | Vestuario Antiguo | 2025-Present

- Developed the client's initial direction and references into a complete visual identity, including the logo, and designed the public catalog and rental experience
- Built and continue to own the Rails product behind catalog, fittings, orders, availability, media, administration, deployment, and production operation

Senior Software Engineer · Oversize.io (contract) - 2025-2026

- Built Python acquisition and extraction pipelines for hundreds of legal and regulatory sources in a Rails/PostgreSQL product, normalizing changing HTML, PDF, and custom formats into a shared schema

DevOps / Infrastructure Consultant · Various clients (contract) - 2025-2026

- Operated bare-metal Linux services and reproducible deployments with systemd, nginx/TLS, monitoring, backups, and deployment automation

Senior Rails Developer · ExamSuccess.com.au (contract, part-time) - 2016-2024

- Owned Rails/PostgreSQL feature delivery and production support across an eight-year remote engagement covering testing, essays, tutoring sessions, and student/tutor workflows

Rails Developer · Jualo.com - 2018

- Reduced response times roughly 10x through caching and database-query improvements for a Rails marketplace serving 4M+ monthly users

Earlier engineering roles · Various clients, Rookee, RSoft / Brocade - 2009-2016

- Delivered Rails/PostgreSQL applications, built distributed search-engine data-acquisition infrastructure, and developed automated integration testing for Fibre Channel networking systems

SELECTED PUBLIC WORK

github.com/unmanbearpig · unmb.pw · Go/SQLite music-analysis service · macOS Swift/Rust launcher · published Firefox extension · Linux kernel HID patch
